HOW TO USE THE CUMULATIVE INDEX

The Cumulative Index uses perfect alphabetizing. This means that words appear in alphabetical order as if each entry were one word. Spaces and hyphens do not affect the placement of the word. Here are a few examples. The entry **Lightning** comes after **Light Exposure** but before **Light Trucks**. That is, "Lightn..." comes after "Lighte..." but before "Lightt..." Here is another example. **Diethylenetriamine pentaacetic acid** will fall in between the two entries **Diet and Health** and **Dieting**, as "Dieth..." comes after "Dieta..." but before "Dieti...." Perfect alphabetizing also means multiple-word entries may not be listed together. For instance, the first entry for **Ant Behavior** appears on page 15, but the entry **Ant Pollination** does not appear until page 17 because there are more than 170 entries that come in between these two words. Finally, remember to look up different forms of words. Don't just look up **Sense of Smell**; also check out **Sensory**; don't just look up **Teeth**, but also **Tooth**; **Genes**, and **Genetics**; etc.

To help you determine which abstracts are found in which issue, here is a list of the range of abstracts for each month:

September 2005 (Vol. 32, No. 1)	05/06-0001 to 05/06-0305
October 2005 (Vol. 32, No. 2)	05/06-0306 to 05/06-0610
November 2005 (Vol. 32, No. 3)	05/06-0611 to 05/06-0915
December 2005 (Vol. 32, No. 4)	05/06-0916 to 05/06-1220
January 2006 (Vol. 32, No. 5)	05/06-1221 to 05/06-1525
February 2006 (Vol. 32, No. 6)	05/06-1526 to 05/06-1830
March 2006 (Vol. 32, No. 7)	05/06-1831 to 05/06-2135
April 2006 (Vol. 32, No. 8)	05/06-2136 to 05/06-2440
May 2006 (Vol. 32, No. 9)	05/06-2441 to 05/06-2745

Statement of purpose. *Biology Digest* organizes, summarizes, and indexes worldwide scientific literature in the life sciences. It is designed to assist students and educators at the secondary school and undergraduate college levels in keeping current on the latest scientific developments and in performing special research projects.

Method. The staff of *Biology Digest* screens some 200 periodicals, foreign and domestic, looking for significant new information relevant to the biological sciences. This material is summarized, organized into chapters, and indexed by subject and author.

Abstracts. The abstracts or "digests," which are up to 325 words long, give as much information as possible about the original material, including conclusions and methods. The idea is to enable students who may not have ready access to the original documents to understand and keep current on the latest biological research. Each issue of *Biology Digest* contains approximately 300 abstracts.

Citation numbers. Abstracts are numbered sequentially through the entire volume. The first four characters represent the academic year of the volume, and the four characters following the hyphen represent the abstract identification number—05/06-0001, 05/06-0002, 05/06-0003, etc.

Keyword Index. Each abstract is assigned certain keywords that spotlight the main points of the article. Each keyword becomes an "entry" in the keyword index which refers the reader back to the appropriate abstract. The indexing technique used in *Biology Digest* is called "free-language," which means that the keywords chosen to represent each article are not restricted to a thesaurus or master list of keywords but rather are picked to conform to the language in the original material.

Author Index. Each issue contains its own author index to facilitate locating research performed by a particular scientist.

Feature Articles. Each issue contains a special authoritative feature article on a particular area of biological research. Additional copies of feature articles are available for a nominal fee. See pages viii and ix for a list of past feature articles and pricing information.

Hot Science: Biology in the News. Three original articles are presented each month on important, interesting–often curious and fascinating–biological advances.

Master list of publications. Publications received regularly and cited in *Biology Digest* are listed in the front of each issue.

Subscriptions. *Biology Digest* is published monthly, September through May. A subscription to Volume 32 for the 2005-2006 school year is $149 ($159 for foreign subscriptions). All subscriptions are for a full volume (nine issues) and the Cumulative Index. New subscribers automatically receive any issues already published in the current volume. Single copies of *Biology Digest* issues may be ordered prepaid for $14 each. A limited number of back volume sets also are available—Volumes 5-7 at $79 ($85 for foreign subscriptions), 8 at $98.50 ($104.50 for foreign subscriptions), 9-11 at $111.50 ($117.50 for foreign subscriptions), 12-14 at $120 ($126 for foreign subscriptions), 15 and 16 at $124 ($130 for foreign subscriptions), 17-21 (which include the Cumulative Index), at $125 ($135 for foreign subscriptions), 22-25 (which include the Cumulative Index), at $129 ($139 for foreign subscriptions), 26-28 at $139 ($149 for foreign subscriptions) 29-31 at $149 ($159 for foreign subscriptions). Payment must accompany all subscription orders from outside the U.S. and Canada.

Cumulative Index. To facilitate research, an integrated cumulative index containing both keywords and author references is published at the end of the volume year. The Cumulative Index to Volume 5 (1978-79) and Volume 6 (1979-80) are $18.50 each. Volume 7 (1980-81), Volume 8 (1981-82), Volume 9 (1982-83), and Volume 10 (1983-84) are $19.50 each. Volume 11 (1984-85) and Volume 12 (1985-86) are $22.50 each, and Volume 13 (1986-87), Volume 14 (1987-88), Volume 15 (1988-89), and Volume 16 (1989-90) are $25 each. Beginning with Volume 17 (1990-91), the Cumulative Index became an automatic part of a subscription to *Biology Digest*. Cumulative Indexes for Volumes 17-30 are available, however, for purchase at $25 each.
